

CORROSION PREVENTIVE PRODUCTS - TRANSPORTATION

FOR TRUCKS, TRAILERS, TRANSIT VEHICLES AND RV'S

T185GW BLACK/GRAY Pigmented Undercoating Applications: OEM & Transportation

- A solvent cutback, thixotropic, corrosion preventive compound.
- The dry film is semi-firm and has a semi-gloss appearance.
- Provides outstanding protection in marine, tropical, and industrial environments, and is widely used for transportation equipment.
- Possesses dielectric strength of 800 volts per dry mil of coating.
- Provides galvanic corrosion protection where dissimilar metals meet and can be applied on battery terminals for insulating purposes.

T4033 Waterborne Self Healing Undercoating Applications: OEM & Transportation

- A waterborne, thixotropic, black corrosion preventive compound.
- The dry film is waxy and non-tacky.
- Provides excellent weathering and corrosion protection for industrial applications including various forms of wood flooring.
- Recommended for use in the transportation industry as an undercoating for metal and wood surfaces.

C-2020A Undercoating Applications: OEM, Transportation, Automotive

- Specifically formulated to protect metal against corrosion from weather or road splash containing salt and other corrosion chemicals.
- Excellent salt spray resistance with low temperature flexibility. Meets the stringent requirements of the automotive rust protection program.
- Designed for underbody, frames, trunks, and suspension systems of automobiles, trucks, busses, trailers and recreational vehicles.
- Approved under military specifications MIL STD TT-C520B.

T3344 Zero VOC, Waterborne Undercoating Applications: OEM & Transportation

- Formulated to provide excellent adhesion, hardness and durability to most substrates including primers, e-coat and oily steel.
- Designed to resist chipping, scratches and gravel marks normally seen on truck and trailer underbodies.
- A zero VOC, air-dry, waterborne corrosion preventive coating for ferrous and non-ferrous metals.
- Can be recoated with most urethane, acrylic or alkyd resin formulated automotive topcoats.
- Excellent Vibration Damping Properties per SAE J-1637

TRUCK BED PROTECTIVE COATING

C-3500 Epoxy Bed Liner

Applications: Transportation, General Industrial and Automotive

- Provides superior resistance to abrasion, scraping damage and reduces static electricity.
- Designed as a long-term durable coating where most traditional paints or coatings cannot withstand heavy wear, exposure and corrosion prevention.
- A viscous two-component epoxy compound that when mixed can be applied to metal, wood, concrete and fibreglass.
- Benefits of very low VOC emissions.
- Contains no isocyanates.
